Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/20/2005 has been entered.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 33 recites the limitation "the second communications signals" in lines 19-20 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 33-48 are rejected under 35 U.S.C. 102(e) as being anticipated by anticipated Forrester, US 6,865,376.

The applied reference has a common inventor/assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 33-48, in light of the rejection under 35 USC 112, second paragraph, with regard to claim 33, Forrester discloses an antenna system for a wireless communications device (and method) comprising: a main antenna system with full duplex capability, coupled to the wireless communications device, and configured to receive communications signals according to a first mode and a first band; an auxiliary reception system comprising: an auxiliary antenna, a first processing module, selectable connected to the auxiliary antenna (and disposed orthogonal to the main antenna and limited to half-duplex) and configured to receive communications signals according to the first mode and the first band, a second signal processing signal processing module selectably connected to the auxiliary antenna, and configured to receive an auxiliary signal, and a selector module selectably connected to the first and second signal processing modules; and a controller operatively connected to the main antenna system and the selector module, the controller configured to separately receive

signals communicated on the main antenna system and the auxiliary reception system, the selector module configured to pass of [a] second communications signals and the auxiliary signal to the controller (and first and second bands, which are different and wherein the second signal is GPS signal) (see Fig. 2A, 2B and col. 2, lines 19-67 and col. 4, line 17 to col. 5, line 44).
